

Paul, one of our amazing Cheshire East Waste Reduction Volunteers, shows us how to make refilling really easy when re-using your garden bags.

- Take an old bucket, plant pot or plastic container...
- Cut the bottom out of it...
- Push it into the open bag you wish to refill and start filling.
- Especially useful if you don't have a handy helper!

Any strong plastic bags you receive; compost bags, parcel bags, pet litter or food bags. Consider saving and re-using them, rather than throwing them out. Any plant pot or plastic container that has a hole in the bottom can be useful as a funnel when re-filling.
